EDUCATION

California State University Fullerton

Bachelor of Science in Computer Science

Fullerton, CA

Aug. 2022 - May 2026

Activities

Association of Computing Machinery, Offensive Security Society, Vietnamese Student Union

TECHNICAL SKILLS

Languages: Python, Java, C/C++, Assembly, SQL, JavaScript, HTML/CSS, GDScript

Frameworks: React, Node.js, WordPress, FastAPI

Developer Tools: Git, Godot, VS Code, Visual Studio, Eclipse

Relevant Courses: Computer Organization and Assembly Language, Artificial Intelligence, OOP, Data Structures and Algorithms

EXPERIENCE

Meta Ambassador

Ray-Ban Meta

July 2023 – Present

Los Angeles, CA

- Developed an in-depth understanding of the **Meta AI Smart Glasses**' software architecture, **AI integration**, and hands-free functionality.
- Provided live demonstrations, product testing, and technical support, identifying areas for software improvement.
- Worked closely with the Meta AI team to understand the underlying **machine learning models**, **NLP capabilities**, and **cloud integration**.

CodePath TIP

Interview Lead Prep

May 2024 – July 2024

Los Angeles, CA

- Led weekly coding sessions, mentoring students in **data structures**, **algorithms**, and system design for SWE interviews.
- Assisted 20+ students** in debugging and optimizing code, learning Big-O notation, and improving problem-solving speed by **35%**
- Guided students in coding best practices, debugging, and optimizing solutions in **Python**, **Java**, and **C++**.

Essilor Luxottica — Disney

Sunglasses Hut

August 2023 – Present

Anaheim, CA

- Collaborated with the team to **drive sales**, build relationships, meet daily goals, and deliver a seamless Disney experience.
- Utilized **CIAO** software to track customer interactions, analyze sales trends, and optimize engagement strategies.
- Collaborated with supervisors using digital dashboards to monitor performance metrics, align on **KPIs**, and refine sales strategies.

PROJECTS

RFID Checkout Systems | *Python, C++, Java, Node.js, SQL*

Created RFID-based system to **automate inventory tracking** & checkout for Sunglasses Hut

June 2020 – March 2021

- While working as a **sales associate**, developed a self-checkout interface and **backend logic**, enabling seamless product scanning and payment processing.
- Led system development using **RFID hardware**, **SQL**, and Python for real-time tracking and self-checkout functionality.
- Engineered anti-theft mechanisms with RFID tags, reducing shrinkage by 30% through automated security alerts.

Monster Slayer | *GDScript, Assembly, C++, Git, HTML, CSS*

2D idle clicker RPG in Godot Engine with incremental progression and auto-attacks.

May 2018 – May 2020

- Developed a **2D idle clicker RPG** using Godot Engine and **GDScript** with custom game mechanics.
- Designed and animated all game assets, creating original pixel art, UI elements, and sprite animations.
- Optimized game performance, reducing processing time by 30% through efficient state management and scripting.
